DETAILED ACTION

Drawings

Figure 4 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 7,8, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Blon et al., U.S. Patent # 6,583,660 B2.

Fig. 2 of Blon et al. discloses a circuit comprising: amplifier 200 can be read as operational amplifier; circuit 232 having OP2, transistor 244 can be read as means for introducing an additional current (current from output of transistor 244); VCM can be read as a direct-current voltage source; OP2 (or amplifier 242) and transistor 244 can be read as a transconductor; OP 2 can be read as feedback means; transistors X1, X2,

Art Unit: 2817

current mirrors 210, 212 can be read as a differential input stage; nodes between resistor 216 and output of current mirror 210 and between resistor 218 and output of current mirror 212 can be read as one internal node of said operational amplifier or a node of said differential input stage; OP1 can be read as a second stage.

Regarding claim 10, although Blon et al. does not structurally disclose a method for reducing an output offset voltage of an operational amplifier, it resides inherently in his apparatus.

Allowable Subject Matter

Claims 5, 6, and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents # 6,683,441 B2, # 4,760,349, and 2005/0110550 A1 contain some limitations of the claimed invention.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
